Draft prepared on 4 October 2026 from the project MVP specification and current implementation. Original scope document pending confirmation. Built features and remaining deliverables are distinguished below; external integrations are not certified as live-tested by this document.

Project Title	**Multi CRM Unified Sales Platform**
Supervisor Name	
Co Supervisor Name	
Group Information	
Roll Number	**Student Name**

Module Name	Module Description with Deliverables
User Management and Access Control	• Secure login and logout with password hashing and database-backed sessions. • Separate Admin and Agent workspaces; Manager access to administrative functions. • Client assignments, selected-client access controls and organization isolation. • User, client and integration administration with recorded audit activity. **Status** *Supporting platform capability. Independent agent signup, email verification and Google sign-in remain deferred on a separate branch.*
6.1 Multi CRM Sync Engine	• HubSpot agency CRM with unified contacts, companies, deals, owners and sales activities. • Client-specific Zoho CRM records, synchronization and supported record editing. • Closed Won handoff from agency deals to the relevant client CRM with duplicate protection and retry. • Provider connections, encrypted credentials, synchronization history and manual Sync or Retry controls. **Status** *Full automatic cross-system synchronization and conflict recovery still require completion and verification. External writes do not form one atomic transaction.*
6.2 VoIP and SMS Identity Gateway	• Administrator assignment of client-specific Twilio numbers and agent identity selection. • Outbound SMS and phone calls that ring the agent first, then bridge the selected contact. • Signed incoming SMS and voice webhooks, client routing and optional incoming-call forwarding. • Delivery status, call outcomes and duration recorded in the timeline; manual call and SMS links remain available. **Status** *Implemented in the current branch. Live Twilio verification requires configured credentials, numbers and a public callback address.*

Module Name	Module Description with Deliverables
6.3 Unified Interaction Aggregator	• A client-specific timeline linking interactions to contacts, companies and deals. • Imported HubSpot calls, meetings, tasks, notes and permitted email activities. • Incoming and outgoing Twilio events with status updates and duplicate protection. • Manual interaction and note entry, filtering, and refresh of communication activity. **Status** *HubSpot email history depends on provider permission. Dedicated mailbox ingestion and automatic call transcription remain pending.*
6.4 AI Intelligence and Lead Analysis	• Transcript entry linked to an active-client contact and stored analysis history. • Rule-based extraction of budget, timeline, requirements, intent and objections. • Explainable lead score, lead temperature and deal-probability estimates. • Manual review and correction of analysis fields and scores with audit records. **Status** *The current analysis uses deterministic rules. AI model integration, automatic transcript ingestion and approved extraction-to-CRM updates remain pending.*
6.5 Sales Script Architect	• Context-based script drafts using client branding, contact details and saved lead analysis. • Template generation for call, SMS and email channels with a selected purpose. • Saved scripts and reusable templates available in the agent workspace. • Manual script creation, editing and override with client-scoped storage. **Status** *Generation is template-based. AI-written and adaptive sales scripts remain pending.*
6.6 Commission and Financial Tracker	• Automatic commission creation for attributed Closed Won deals with a closing snapshot. • Rate selection from deal, agent, client or agency defaults. • Expected, received and pending balances with payment entries and audited manual corrections. • Agent and agency reporting, inclusive closing-date filters, currency-separated totals and CSV export. **Status** *Live CRM verification remains necessary. Payment-date cash-flow reports and historical balance snapshots are separate future work.*

Module Name	Module Description with Deliverables
6.7 Sales Ops Reconciliation	• Automatic active-work tracking by agent and selected client with Pause and Resume controls. • Focus and inactivity handling, server-calculated time and protection against overlapping sessions. • Manual time entries, correction of recorded work and reconciliation of operational totals. • Personal closed-deal tracker with optional ClickUp task synchronization and retry; financial reconciliation uses commission balances. **Status** *Core time tracking and reconciliation are implemented. Offline work requires manual entry; live ClickUp verification remains provider-dependent.*
6.8 Workflow and Smart Scheduling	• Client-linked local appointments with create, edit, confirm and cancel actions. • Agent-owned Google Calendar, Outlook and Calendly OAuth connections. • Supported external booking, update or cancellation, optional invitations and synchronization retry or refresh. • Calendly individual event-type management and weekly availability editing; manual scheduling remains available. **Status** *Provider verification is still required, including Outlook. AI meeting-intent detection and extended Calendly question/location handling remain pending.*
6.9 Document and Proposal Generator	• Template-based proposals, follow-up email drafts and message drafts using client and lead context. • Editable stored drafts, manual documents and draft/final status management. • Linking documents to contacts, lead analyses and deals within the selected client. • PDF upload, storage and download with audit records; uploaded PDFs are replaced by re-uploading revised files. **Status** *Draft generation is template-based. AI proposal drafting remains pending.*

Evaluator Feedback

Please record recommended improvements or additional modules in the section below.
